

SPECIFICATIONS

File format: Single page, printable PDF (all versions).

Color space: CMYK. Only CMYK colors should be used. Any spot colors supplied will be converted to CMYK.

Resolution: 72-120ppi at full size.

Color management: Moss will use an ISO Coated V2 color profile on all artwork. See below.

Artwork scale: 1:10 (10%)

Maximum print size at full scale: 240" x 600" either landscape or portrait.

Paneling: Paneling occurs when the smaller of the two dimensions exceeds 120", all panels will be evenly divided.

Art size at full scale: Viewable area in inches (length x height) as measured from the outside edges of your frame and entered into the Moss Select website.

Bleed: No bleed needs to be supplied with artwork. Artwork should only be the viewable area. If artwork with bleed is uploaded to Moss Select, the user will be given the opportunity to trim off the bleed or shrink the artwork so the artwork matches the order size.

Critical art: Due to the variable nature of shrink and stretch with textiles, the outside 2% of artwork on all sides should be non-critical. The use of white borders or thin strokes at or near the edges of artwork is not recommended.

PDF CONSIDERATIONS

Purpose: Using a PDF file format assures the best artwork consistency thru the printing process.

Converting art to PDF: After selecting PDF when saving a file, the other selectable settings will not affect the Moss Select printing process. However, we do have "Moss PDF Presets" that you can use to avoid having to worry about conversion settings. These presets are not necessary but [can be downloaded here](#).

Artwork quality: Artwork can be created in many unique ways with some features (overprinting, transparencies, special effects, ETC) possibly causing undesired results when printed. While Moss Select will accept any type of PDF file (including all features), Moss does recommend that you save your artwork as a flattened PDF and inspect the file before submitting. [It's important that PDF files be thoroughly examined for correctness before being submitted.](#)
Moss is not liable for errors visible in supplied artwork.

COLOR MANAGEMENT

Standard: Moss Select only prints to a rigorously maintained ISO Coated V2 color standard.

For critical color management:

1. Order the Moss Select color chart (1347 colors to choose from). Order the Basetex color chart for Basetex and Barriertex colors. Order Stretchglow color chart for Stretchglow colors (backlit).
2. Pick the color you want on the color chart.
3. Read the CMYK value below the color on the color chart and assign this CMYK value to the color in your art.
4. Colors on jobs with CMYK values assigned from the color chart are guaranteed to match!
